

Scan to e-mail setup

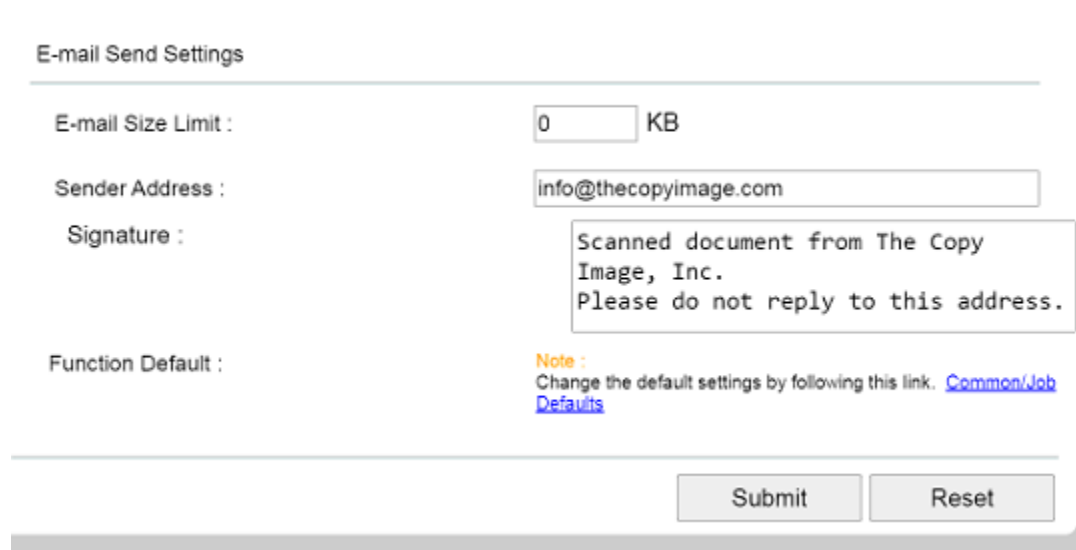

Access the Command Center (web interface) of the Kyocera MFP by entering the IP address of the Kyocera MFP into the address bar of a web browser. Then log into the Command Center with the user name Admin and the password of Admin. Click Login.

Once logged in, select Function Settings then E-mail. Fill out the SMTP portion of this page with the correct info according to your SMTP settings.

Also, on this page is the sender address down towards the bottom of this page. There needs to be an actual working email address in the space. All the scans to email from the Kyocera MFP will be from this address. I recommend a general email address if your business has one.

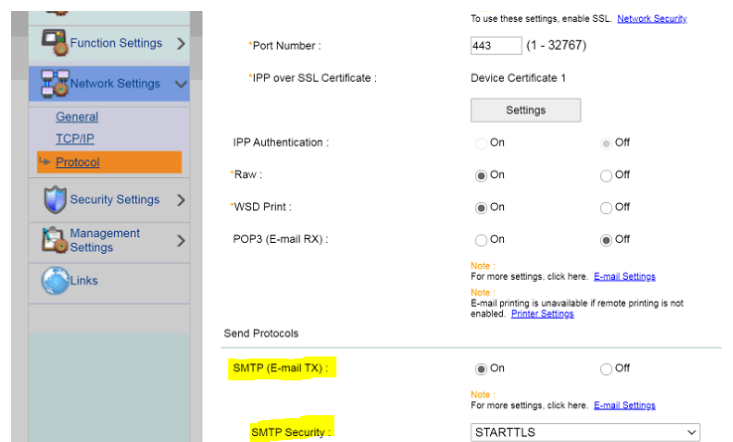

The screenshot shows the 'E-mail Send Settings' page. It includes the following fields and options:

- E-mail Size Limit :** A text input field containing '0' followed by 'KB'.
- Sender Address :** A text input field containing 'info@thecopyimage.com'.
- Signature :** A text area containing the text: 'Scanned document from The Copy Image, Inc. Please do not reply to this address.'
- Function Default :** A note in orange text: 'Note : Change the default settings by following this link. [Common/Job Defaults](#)'.

At the bottom right, there are two buttons: 'Submit' and 'Reset'.

As far as the e-mail size limit, 0 = no size limit. Your e-mail provider may have a set limit on the size of emails you can send. Click Submit.

The SMTP Protocol needs to be turned on. In the left menu, select Network Settings and then Protocol. Turn on SMTP (E-mail) and select the SMTP Security SSL/TLS, STARTTLS or OFF according to what your E-mail server requires. Click Submit at the bottom of page and test.

The screenshot shows the 'Network Settings' page, specifically the 'Protocol' sub-section. The left sidebar menu is visible with 'Protocol' selected. The main content area includes the following settings:

- Port Number :** A text input field containing '443' with '(1 - 32767)' next to it.
- *IPP over SSL Certificate :** A dropdown menu showing 'Device Certificate 1'.
- Settings** button.
- IPP Authentication :** Radio buttons for 'On' (selected) and 'Off'.
- *Raw :** Radio buttons for 'On' (selected) and 'Off'.
- *WSD Print :** Radio buttons for 'On' (selected) and 'Off'.
- POP3 (E-mail RX) :** Radio buttons for 'On' and 'Off' (selected).
- Note :** For more settings, click here: [E-mail Settings](#)
- Note :** E-mail printing is unavailable if remote printing is not enabled. [Printer Settings](#)
- Send Protocols** section:
- SMTP (E-mail TX) :** Radio buttons for 'On' (selected) and 'Off'.
- Note :** For more settings, click here: [E-mail Settings](#)
- SMTP Security :** A dropdown menu showing 'STARTTLS'.
